

PROJECT SNAPSHOT

TOXFREE HELP TO CLEAN ASBESTOS CONTAMINATED BREAD FROM A TRUCK AT BAKING PLANT IN QUEENSLAND

The issue

A truck carrying a trailer of bread in Queensland hit a building that contained asbestos. The accident caused the roof to be taken off the truck and allowed asbestos into the trailer where the bread was being stored. The bread became contaminated and highly dangerous, it needed to be safely disposed of and the truck cleaned.

The solution

The client is an existing customer of Toxfree, which made them the natural choice for the job. Once the call was received, Toxfree operators went onsite to safely remove all the contaminated bread, which was disposed of legally and safely in a deep burial. Toxfree cleaned up the contaminated areas, including a thorough hand wash of the truck and equipment and fixed the trailer damage.

The outcome

The customer was extremely happy with the manner and time frame in which the job was started and completed. The area was cleaned in a short amount of time so work could continue as usual.
