

PROJECT SNAPSHOT

TOXFREE SITES HELP TO CREATE SAFETY VIDEOS FOR
VOCAM

The issue

Vocam is a safety training and induction company that create high quality realistic videos for a broad range of businesses. Vocam needed a location to produce a video addressing the safety around working in extreme weather conditions and the risks included in these jobs and in these environments.

The solution

Vocam required a site that had plenty of space for filming, as well as areas both undercover and in the sunlight. They also required a location that looked like a real and used worksite with props and equipment available.

Toxfree Laverton and Sunshine sites both met the requirements of Vocam and provided a variety of locations for filming to take place.

The outcome

After waiting for an appropriately sunny day, Vocam were welcomed by Toxfree and briefed on safety around the site. The day was then spent filming, showing scenarios such working in the sun, moving to the shade, working in the rain/ wet conditions and stopping work if the weather became too extreme. With the help of fake sweat, sunburn and rain the videos were a success. Once completed, Vocam has supplied Toxfree with a copy of the video which will be used for training purposes.

**Images included are of actors, camera man and director.*
